**Summary: CICASP Seminar 51  
PWS Symposium Practice Talks**

This block of CICASP Seminars gave students the opportunity to practise their talk in advance of the 7th International Symposium on Primatology and Wildlife Science (2nd-4th March). The following students presented:

Josue

"Stress in Japanese macaques living in vegetated and non-vegetated enclosures".

Yuri

"Do chimpanzee also prefer baby to adult? : preliminary report."

Akito

"What insects do three species of forest guenons eat? : using DNA metabarcoding."

CICASP faculty and other students gave helpful feedback, comments and pointers. Members of the audience benefited from both giving and hearing feedback.

Wednesday 15th March, 2017

**Outline: CICASP Seminar 52  
Mini-debates: Historical Context**

This is the last block for this semester and will run on March 15th, 22nd and 29th. We return to the popular and fun theme of mini-debates. This activity will hone your critical thinking. This time, we will be focussing on debates set in their historical context. We will be re-visiting various debates, on science-related topics, that have now been resolved. However, while we think critically about the subject and argue 'for' or 'against', we will imagine that we are in the period of time/history when the topic was still a hot issue. This first session will be an introduction to this concept, with no prior preparation needed.
