

SUMMARY

CICASP Seminar in Science Communication #113

Introduction to Sci Com Seminars

5 PM-, Wednesday, October 16, 2019

In this first workshop, we briefly reviewed the previous semester's workshops and set the pace for the new season by introducing the upcoming sessions. We defined the role of CICASP and welcomed participants' suggestions for the future seminar topics.

OUTLINE

CICASP Seminar in Science Communication #114*

PRI Exposed! #1

5 PM-, Wednesday, October 23, 2019 (PRI Large Conference Room)

In the next block of seminars, we invite you to showcase different sections of PRI. Ranging from fields of ecology, behaviour, sociology, cognition, physiology, genetics, biomedicine, morphology to paleontology, each section has its own research scope and framework. Nevertheless, combining several disciplines and drawing knowledge from several fields allows for a more complete (and thrilling!) discussion of science.

During the first session (10/23), you will discuss in small groups what your research sections do, including what your daily lives are like as scientists. This will get you prepared to introduce your sections to everyone in mini-presentations the following week (10/30). Please bring a laptop computer if you think you may want to put together a few slides (it's optional).

This will be a great chance to bring together students and other researchers who may be unaware of their neighbors' activities, and to think about the common thread that unites all the sections under the missions of PRI. We hope that this activity helps you explore the possibilities of interdisciplinary collaborations within PRI.

*This workshop will not be videocast to WRC, but WRC students are welcome to attend it at PRI.

Schedule of CICASP workshops [Fall 2019]

October Block (10/23, 30) - *PRI Exposed!*

- Introduce your research section to colleagues who work in other fields of primatology/wildlife science.

November and later blocks – To be Announced
